Talcor Breakout Blue

Anti-seize compound

Product description

Talcor Breakout Blue is an anti-seize compound with a distinctive blue colour with its revolutionary technology, consisting of the new generation of stable anti- weld fillers, highly refined, high viscosity base stocks bound with a high melt complex thickener.

Customer benefits and product features

- Contains no heavy metal fillers or heavy metal additives.
- Adhesive and cohesive properties ensure excellent adhesion, even in wet conditions, whilst helping to minimise fling-off.
- High drop point complex thickener provides excellent pumpability and good stability at high temperatures.
- Will not build up in thread roots, yet leaves sufficient coverage to help extend re-lubrication cycles.

Applications

All drill rod, tubes and flanges that are constantly connected and disconnected, typical of the on-shore drilling industry.

Note: Due to its chemical formulation Breakout Blue is not recommended for general purpose greasing.
